

Strategy Description

An investor in this strategy, whilst being relatively cautious, will be seeking a reasonable return from their investment. They will be prepared for moderate fluctuations in the value of their investment over the medium to long term. Underlying assets will include exposure to equities as well as fixed income, cash and other assets.

Commentary

The pain of October's month end sell-off faded rapidly as equity and bond markets rallied in the aftermath of the Trump election victory. Only Europe and Japan had negative equity market performance. In Japan, this was driven by the unexpected general election that was called and the weak coalition government that followed. In Europe, market weakness stemmed from the abrupt announcement of a general election in Germany scheduled for next February, coupled with fears of tariffs being imposed on European exports by the incoming Trump administration in 2025. US equity markets reacted enthusiastically to Trump's election, buoyed by optimism that Republican control of both the House of Representatives and the Senate would allow Trump's economic plans to be quickly enacted.

Beyond the impact of Trump, the broader investment environment remains positive. In November, both the US Federal Reserve and the Bank of England lowered rates, suggesting that monetary policy remained tight and further cuts were possible if inflation continues to moderate. Similarly, the European Central Bank has signalled its intention to reduce interest rates further. Global economic growth remains positive, energy prices continue to decline and labour markets remain tight – a combination that supports continued positive performance in risk assets.

During the month, the **Oalglen Wealth GBP Conserve strategy** returned +1.88%, outperforming the ARC Cautious benchmark which returned +1.10%. Subsequently, the strategy remains ahead of the benchmark on a YTD basis, as well as over 1 year, 3 years and since inception.

The top contributors during the month were positions in the Stonehage Fleming Global Best Ideas Fund, Brown Advisory Global Leaders Fund and the PIMCO Global Bond Fund. The two former positions benefitted in part from the rotation out of value stocks and back into growth stocks (a reversal of the trend experienced in the third quarter of the year). Additionally, the Stonehage Global Best Ideas Fund benefitted from solid earnings reports for some of its largest holdings, which the market reacted very positively to. It was particularly pleasing to see Stonehage Global Best Ideas outperform, having struggled recently with sideways trending performance. A thorough evaluation took place and our conclusion was continued confidence in the managers ability to outperform over the longer-term, particularly given its high quality "best of breed" approach with many of its holdings trading at attractive valuations with strong earnings growth. There has also been some recent self-help measures, such as exiting their position in Nike and Estee Lauder, whilst initiating positions in Copart, Eaton Corp and increasing exposure to Amazon (two of these were the top performers mentioned above).

Overall, we remain positive on the investment outlook but anticipate greater volatility due to President-elect Trump's unpredictable leadership style. In response, we have added exposure to US small cap stocks through the initiation of the iShares S&P Small-Cap 600 ETF, an area poised to benefit from lower taxes and regulatory reforms.

*Performance is based upon the total return of the investment strategy and actual client returns may vary.*Performance is calculated using a time-weighted rate of return using daily valuations.*Strategy inception date is 31.12.2019.*All of the investments used in the strategy were available during the time period presented.*The strategy holds both accumulation and distribution share classes therefore where distribution share classes are held, cash is not re-invested.*All transactions are executed using closing prices on the day they are communicated.*Strategy is subject to rebalancing at least half-yearly.*Performance is stated net of a 1% per annum Oakglen management fee and underlying investment fees.*Expected volatility is the maximum standard deviation that can be expected of the strategy over a market cycle. Standard deviation measures the dispersion of returns relative to the average return. It depicts how widely the returns vary over a period of time. When an investment has a high standard deviation, the expected range of performance is wide, implying greater volatility.*Expected maximum drawdown is an indicator of downside risk over a specified time period. It is the portfolio's maximum loss, expressed as a percentage, in a peak-to-trough decline before a new peak is attained.*Asset allocation is reflective of the current strategy exposure but is subject to change. *The ARC Cautious PCI is determined by Oakglen to be the most suitable benchmark for comparison purposes only. It must be noted that the last 3-month performance figures may be based on ARC estimates and may therefore be subject to revision. Further information can be found here: www.suggestus.com. Oakglen reserves the right to remedy any errors that may be present in this document. Oakglen, its affiliates and / or their employees may have a position or holding, or other material interest or effect transactions in any securities mentioned or options thereon, or other investments related thereto and from time to time may add to or dispose of such investments. This document is intended only for the person to whom it is issued by Oakglen. It may not be reproduced either in whole, or in part, without our written permission. The distribution of this document and the offer and sale of the investment in certain jurisdictions may be forbidden or restricted by law or regulation. This communication does not constitute the solicitation of an offer to purchase or subscribe for any investment or service in any jurisdiction where, or from any person in respect of whom, such a solicitation of an offer is unlawful.

Investments may have no public market or only a restricted secondary market. Where a secondary market exists, it is not possible to predict the price at which investments will trade in the market or whether such market will be liquid or illiquid. As such, for investments not listed or traded on any exchange, pricing information may be more difficult to obtain, and the liquidity of the investments may be adversely affected. A holder may be able to realise value prior to an investment's maturity date only at a price in an available secondary market. The issuer of the investment may have entered into contracts with third parties to create the indicated returns and/or any applicable capital protection (in part or in full). The investment instrument's retention of value is dependent not only on the development of the value of the underlying asset, but also on the creditworthiness of the Issuer and / or Guarantor (as applicable), which may change over the term of the investment instrument. In the event of default by the issuer and/or Guarantor of the investment, and / or any third party the investment any income derived from such contracts is not guaranteed and you may get back none of, or less than, what was originally invested. Parties other than the Issuer or Guarantor (as appropriate) mentioned in this document (for instance the Lead Manager, Co-structure, Calculation Agent or Paying Agent) do neither guarantee, repayment of the invested capital nor financial return on the investment product, if nothing is indicated to the contrary. Any capital protection given is usually an inherent part of the product; provided through the use of options, futures or other derivative products. You may have to accept smaller returns on an investment relative to a direct investment in the underlying index, basket, etc. because of the costs involved in providing the capital protection. Such capital protection normally only applies if the investment is held until maturity. The amount of initial capital to be repaid may be geared, which means that a fall in the underlying index or securities may result in a larger reduction in the amount repaid to investors. Alternative investments, derivatives or structured products are complex instruments that typically involve a high degree of risk and are intended for sale only to investors who are capable of understanding and assuming the risks involved. Structured products carry counterparty risk, in that in the event of default by the issuer you may lose some or all of your capital invested even when the product carries capital guarantees. Where this document relates to emerging markets, such investments should be made only by sophisticated investors or experienced professionals, who have independent knowledge of the relevant markets, are able to consider and weigh the various risks presented by such investments and have the financial resources necessary to bear the substantial risk of loss of investment in such investments. The services described are provided by Oakglen or by its subsidiaries and/or affiliates in accordance with appropriate local legislation and regulation. Certain products and services may not be available in all locations or to all Oakglen clients. Data Source: Oakglen Wealth (Jersey) Limited and Oakglen Wealth Limited, otherwise specified.
