

Strategy Description

This strategy is designed for those investors seeking higher long term returns but with a greater tolerance for risk. They are comfortable with wide fluctuations in value and prepared to accept, at frequent times, periods of substantial loss to their investment. With a significant proportion of equity based investments, exposure to other assets in this portfolio will be very limited.

Key Facts

Inception date	31 December 2019
Minimum investment size	£250,000
Minimum recommended time horizon	7+ Years
UK Reporting status funds held	Yes
Expected volatility	<25%
Expected maximum drawdown	<65%

Performance Since Inception

Time Period: 01/01/2020 to 31/12/2024

Commentary

Trump trade enthusiasm clashed with a hawkish stance from the Federal Open Market Committee meeting in mid-December, reversing the rally in US stocks witnessed during the first half of the month. By month-end, the S&P 500 had declined 2.5%, while the NASDAQ posted a modest gain of just under 0.5% for the month. In contrast, UK equities registered losses, European markets advanced, and Asia outperformed, with Japan and China experiencing strong local currency returns.

During the month, the **Oakglen Wealth GBP Grow** strategy posted a decline of -1.60%, underperforming the ARC Equity Risk benchmark which posted a decline of -0.70%. Despite December's challenges, it was another strong year for equity markets, in fact the past two years being the best consecutive years for US equities since the late 1990s. Subsequently, the **Oakglen Wealth GBP Grow** strategy returned +10.64% for the year, outperforming the benchmark which returned +9.80%. In addition to the strong calendar year performance, the strategy remains comfortably ahead over 3 years and 5 years (including since inception).

The top contributors during the month were positions in Polar Capital Global Technology Fund, First Trust Nasdaq Cybersecurity ETF and Invesco Asian Equity Fund. The former two investments have substantial technology and technology related exposure, benefitting from continued excitement for Artificial Intelligence (A.I.) as well as digital defence spending.

We anticipate that several key themes that we highlighted in 2024 will remain prominent in the coming year. Namely, growth in defence spending, particularly in Europe, along with sustained increases in cyber defence spending. The financial sector, which had a strong 2024, is also likely to continue to prosper as yield curves normalise. Additionally, we expect that technology sector spending will stay strong, driven by the mega cap tech stocks in the US fuelling an arms race in the development of A.I.

We also expect less alignment of central bank policy, as the final phases of the fight against inflation will hinge more on domestic factors rather than any of the global supply shocks that produced the inflationary spikes of the past few years. Currently, the US Federal Reserve has adopted a more cautious stance on future rate cuts, while the European Central Bank has suggested they are more confident about meeting their inflation target. This divergence will result in larger interest rate differentials and increased foreign exchange rate volatility. The divergence of US economic policy and that of other developed nations may deepen further. President-elect Trump has pledged significant regulatory rollbacks and tax cuts, positioning the US on a markedly different economic trajectory. In contrast, the UK has recently raised taxes, while political paralysis in France and upcoming elections in Germany do not suggest new economic dynamics there. Meanwhile, China has committed to providing significant new stimulus for their domestic economy, though the policy specifics need to be fleshed out.

*Performance is based upon the total return of the investment strategy and actual client returns may vary.*Performance is calculated using a time-weighted rate of return using daily valuations.*Strategy inception date is 31.12.2019.*All of the investments used in the strategy were available during the time period presented.*The strategy holds both accumulation and distribution share classes therefore where distribution share classes are held, cash is not re-invested.*All transactions are executed using closing prices on the day they are communicated.*Strategy is subject to rebalancing at least half-yearly.*Performance is stated net of a 1% per annum Oakglen management fee and underlying investment fees.*Expected volatility is the maximum standard deviation that can be expected of the strategy over a market cycle. Standard deviation measures the dispersion of returns relative to the average return. It depicts how widely the returns vary over a period of time. When an investment has a high standard deviation, the expected range of performance is wide, implying greater volatility.*Expected maximum drawdown is an indicator of downside risk over a specified time period. It is the portfolio's maximum loss, expressed as a percentage, in a peak-to-trough decline before a new peak is attained.*Asset allocation is reflective of the current strategy exposure but is subject to change.*The ARC Sterling Equity Risk PCI is determined by Oakglen to be the most suitable benchmark for comparison purposes only. It must be noted that the last 3-month performance figures may be based on ARC estimates and may therefore be subject to revision. Further information can be found here: www.suggestus.com. Oakglen reserves the right to remedy any errors that may be present in this document. Oakglen, its affiliates and / or their employees may have a position or holding, or other material interest or effect transactions in any securities mentioned or options thereon, or other investments related thereto and from time to time may add to or dispose of such investments. This document is intended only for the person to whom it is issued by Oakglen. It may not be reproduced either in whole, or in part, without our written permission. The distribution of this document and the offer and sale of the investment in certain jurisdictions may be forbidden or restricted by law or regulation. This communication does not constitute the solicitation of an offer to purchase or subscribe for any investment or service in any jurisdiction where, or from any person in respect of whom, such a solicitation of an offer is unlawful.

Investments may have no public market or only a restricted secondary market. Where a secondary market exists, it is not possible to predict the price at which investments will trade in the market or whether such market will be liquid or illiquid. As such, for investments not listed or traded on any exchange, pricing information may be more difficult to obtain, and the liquidity of the investments may be adversely affected. A holder may be able to realise value prior to an investment's maturity date only at a price in an available secondary market. The issuer of the investment may have entered into contracts with third parties to create the indicated returns and/or any applicable capital protection (in part or in full). The investment instrument's retention of value is dependent not only on the development of the value of the underlying asset, but also on the creditworthiness of the issuer and / or Guarantor (as applicable), which may change over the term of the investment instrument. In the event of default by the issuer and/or Guarantor of the investment, and / or any third party the investment any income derived from such contracts is not guaranteed and you may get back none of, or less than, what was originally invested. Parties other than the Issuer or Guarantor (as appropriate) mentioned in this document (for instance the Lead Manager, Co-structure, Calculation Agent or Paying Agent) do neither guarantee, repayment of the invested capital nor financial return on the investment product, if nothing is indicated to the contrary. Any capital protection given is usually an inherent part of the product; provided through the use of options, futures or other derivative products. You may have to accept smaller returns on an investment relative to a direct investment in the underlying index, basket, etc. because of the costs involved in providing the capital protection. Such capital protection normally only applies if the investment is held until maturity. The amount of initial capital to be repaid may be geared, which means that a fall in the underlying index or securities may result in a larger reduction in the amount repaid to investors. Alternative investments, derivatives or structured products are complex instruments that typically involve a high degree of risk and are intended for sale only to investors who are capable of understanding and assuming the risks involved. Structured products carry counterparty risk, in that in the event of default by the issuer you may lose some or all of your capital invested even when the product carries capital guarantees. Where this document relates to emerging markets, such investments should be made only by sophisticated investors or experienced professionals, who have independent knowledge of the relevant markets, are able to consider and weigh the various risks presented by such investments and have the financial resources necessary to bear the substantial risk of loss of investment in such investments. The services described are provided by Oakglen or by its subsidiaries and/or affiliates in accordance with appropriate local legislation and regulation. Certain products and services may not be available in all locations or to all Oakglen clients. Data Source: Oakglen Wealth (Jersey) Limited and Oakglen Wealth Limited, otherwise specified.
