

Strategy Objective

The Diversify strategy is a long-only investment approach designed to deliver capital growth over the medium to long term through a balanced, unconstrained asset allocation. It maintains a higher allocation to equities (approximately 60%) while incorporating a more substantial exposure to fixed income than the Enhance strategy, alongside selective allocations to alternative assets.

This diversified asset mix is intended to help reduce portfolio volatility and provide a more stable return profile compared with more growth-focused strategies. The strategy targets a medium risk level, making it suitable for investors seeking a more measured approach to risk.

The portfolio is constructed using high-conviction active fund managers with a global perspective, complemented by the selective use of passive vehicles—such as low-cost ETFs—to efficiently access specific markets and thematic opportunities.

The Diversify strategy is most appropriate for investors with a medium to long-term time horizon (typically 5–7+ years) who are seeking steady capital growth with some income, and who are comfortable with moderate levels of risk, including periodic and sustained fluctuations in portfolio value.

Commentary

Global equity markets delivered another positive month in August, led by strong gains in US technology stocks and Japanese equities. Investor sentiment was supported by resilient corporate earnings, with second-quarter results marking the strongest quarter for US profit growth in five years. Commodities also performed strongly, particularly Bitcoin, silver and gold, while bond market returns were mixed. Chinese equities continued to lag global peers amid ongoing concerns around economic growth and investor confidence.

During the month, the **Oakglen Wealth MPS GBP Diversify strategy** returned **+2.42%**, outperforming its benchmark return of +1.10%. The largest contributor was the VanEck Global Mining ETF (+20.61%), which benefited from a sharp rally in gold and gold-mining stocks. Strong performance from major producers including Newmont, Agnico Eagle and Barrick Mining, alongside gains from diversified miners, supported returns. In addition, the iShares Physical Gold ETC also performed strongly. The third-largest contributor was the Polar Capital Global Technology Fund (+3.59%). Following a weaker July, the fund rebounded as positive sentiment towards AI-related investments returned. Its exposure to AI, cloud computing, semiconductors and digital infrastructure was a key driver of performance.

Pleasingly, our specialist Japanese manager, Zennor Japan Fund (+8.51%), was also among the top contributors. The fund benefited from its exposure to Industrials (c.38%), Basic Materials (c.18%) and Financials (c.18%), with stock selection aided by improving corporate governance, value-unlocking initiatives and a supportive domestic backdrop. Another notable contributor was our recently initiated position in BlueBox Precision Medicine Fund (+6.79%). Performance was supported by FDA approval of Revolution Medicines' pancreatic cancer treatment, Rasonque, as well as positive Phase 3 results from the Moderna/Merck personalised cancer vaccine programme, reinforcing our conviction in the long-term outlook for precision medicine.

On the detractor side, Latitude Global Equity Fund (-1.24%) lagged due to its defensive and value-oriented positioning, including a significant underweight to technology. We continue to view the fund as an important core holding that provides diversification and downside resilience. The second-largest detractor was Fidelity Absolute Return Fund (-1.80%). Due to the funds long/short strategy, it captured little of the AI-led market rally, with more defensive exposures weighing on relative performance.

We continue to maintain a well-diversified portfolio with exposure to technology, defence, mining, energy and healthcare. Within fixed income, we remain cautious and favour intermediate-dated bonds. We believe this positioning leaves portfolios well placed to navigate ongoing market uncertainty and volatility.

AVAILABLE VIA THE FOLLOWING PLATFORMS

Performance is based upon the total return of the investment strategy and actual client returns may vary. Performance is calculated using a time-weighted rate of return using daily valuations. Strategy inception date is 01.01.2020. All of the investments used in the strategy were available during the time period presented. The strategy holds both accumulation and distribution share classes. All transactions are executed using closing prices on the day they are communicated.*Strategy is subject to rebalancing at least half-yearly. Performance is stated net of a 0.30% per annum Oakglen management fee and underlying investment manager fees. Expected volatility is the maximum standard deviation that can be expected of the strategy over an economic cycle (typically 7 years but this can vary significantly). Standard deviation measures the dispersion of returns relative to the average return. It depicts how widely the returns vary over a period of time. When an investment has a high standard deviation, the expected range of performance is wide, implying greater volatility. Expected maximum drawdown is an indicator of downside risk over a specified time period. It is the portfolio's maximum loss, expressed as a percentage, in a peak-to-trough decline before a new peak is attained. Portfolio Breakdown is reflective of the current strategy exposure but is subject to change. The ARC Sterling Balanced Asset PCI is determined by Oakglen to be the most suitable benchmark for comparison purposes only. It must be noted that the last 3-month performance figures may be based on ARC estimates and may therefore be subject to revision. Further information can be found here: www.suggestus.com.
