Oakglen Wealth

Discretionary Sterling Enhance Strategy — October 2026

Strategy Description

The Enhance strategy aims to deliver long-term capital growth through a long-only, predominantly equity-based, unconstrained investment approach, complemented by modest allocations to fixed income and alternative assets. This diversified mix is designed to enhance portfolio resilience and reduce overall volatility compared to a pure equity strategy.

Targeting a relative risk exposure of 60–80% versus global equity markets, the strategy offers a more balanced risk–return profile. Its flexible, unconstrained mandate allows for dynamic asset allocation across regions, sectors, and asset classes, enabling the portfolio to adapt to evolving market conditions and capitalise on a broad range of opportunities. The strategy combines high-conviction active fund managers with a global outlook and the selective use of passive instruments—such as low-cost ETFs—to efficiently access specific markets and thematic trends.

The Enhance strategy is best suited for investors with a long-term investment horizon (typically 7+ years) who seek attractive capital growth while maintaining a lower level of volatility than a fully equity-focused strategy. The Enhance strategy is appropriate for medium-to-high-risk investors who are comfortable with moderate to elevated levels of risk, including periodic and sometimes significant fluctuations in portfolio value.

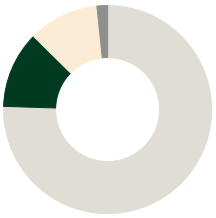

Key Facts

Inception date	31 December 2019
Minimum investment size	£250,000
Minimum recommended time horizon	7 Years
UK Reporting status funds held	Yes
Expected volatility	<15%
Expected maximum drawdown	<35%
12-month yield (trailing)	0.91%
Underlying fund charges (excluding Oakglen fees)	0.76%

Commentary

Three key developments shaped markets during the third quarter. Renewed conflict involving the U.S., Israel and Iran disrupted shipping through the Strait of Hormuz and pushed Brent crude above $100 per barrel. Damage to refineries also constrained refined-product supplies, adding to inflationary pressures. Higher energy prices, monetary tightening and improving economic growth subsequently pushed government bond yields higher, weighing on fixed income and equities.

Despite these headwinds, strong corporate earnings continued to support employment and investment, while AI infrastructure spending remained robust as companies expanded computing capacity and upgraded digital networks. With inflation above target, further modest monetary tightening appears likely. Portfolios therefore remain diversified across technology, defence, energy, mining and healthcare. Within fixed income, we favour shorter-to-intermediate maturities and higher-quality credit to reduce sensitivity to further increases in yields.

Against this backdrop, the **Oakglen Wealth GBP Enhance strategy** returned **-0.74%** in September, compared with -0.50% for its benchmark. Year to date, the strategy returned **+8.05%**, versus +7.30% for the benchmark. The modest shortfall primarily reflected weakness across mining, gold and selected equity positions, which outweighed positive contributions from technology and Japanese equities.

The Polar Capital Global Technology Fund was the largest positive contributor, adding +1.10%, supported by renewed enthusiasm for AI and exposure to cloud computing, semiconductors and digital infrastructure. Zennor Japan added +0.17%, benefiting from its industrial, materials and financial holdings, while Capital Group New Perspective contributed +0.12% through its diversified exposure to high-quality global companies.

The VanEck Global Mining ETF was the largest detractor, reducing performance by -0.52%, reflecting weakness across precious-metal miners as gold and silver prices declined. The Latitude Global Equity Fund detracted -0.23%, as its defensive, value-oriented positioning and technology underweight lagged the AI-led market. Polar Capital Healthcare Opportunities detracted -0.21%, while the iShares Physical Gold ETC reduced performance by -0.20% as rising yields increased the opportunity cost of holding a non-yielding asset, while a stronger U.S. dollar and profit-taking following August's rally also weighed.

While these positions acted as a short-term headwind, they remain aligned with our conviction-led investment approach. We continue to favour structural growth themes including artificial intelligence, defence, healthcare innovation and resource scarcity, while maintaining diversified exposure across sectors and asset classes. We believe this positioning leaves portfolios well placed to benefit from long-term secular trends, while helping to navigate an environment of elevated inflation, geopolitical uncertainty and higher interest rates.

Contribution Analysis

Time Period: 01/09/2026 to 30/09/2026

	Weights	Contribution
Polar Capital Global Tech Fund	11.74	1.10
Zennor Japan Fund	6.80	0.17
Capital Group New Perspectives	8.21	0.12
iShares UK Gilt ETF	1.11	-0.01
Xtrackers MSCI World Energy ETF	6.98	-0.02

Time Period: 01/09/2026 to 30/09/2026

	Weights	Contribution
VanEck Global Mining ETF	6.26	-0.52
Latitude Global Equity Fund	8.78	-0.23
Polar Capital Healthcare Opportunities Fund	3.13	-0.21
iShares Physical Gold ETC	2.93	-0.20
WisdomTree Europe Defence ETF	2.56	-0.19

Performance is based upon the total return of the investment strategy and actual client returns may vary. Performance is calculated using a time-weighted rate of return using daily valuations. Strategy inception date is 01.01.2020. All of the investments used in the strategy were available during the time period presented. The strategy holds both accumulation and distribution share classes. All transactions are executed using closing prices on the day they are communicated.*Strategy is subject to rebalancing at least half-yearly. Performance is stated net of a 1% per annum Oakglen management fee and underlying investment manager fees. Expected volatility is the maximum standard deviation that can be expected of the strategy over an economic cycle (typically 7 years but this can vary significantly). Standard deviation measures the dispersion of returns relative to the average return. It depicts how widely the returns vary over a period of time. When an investment has a high standard deviation, the expected range of performance is wide, implying greater volatility. Expected maximum drawdown is an indicator of downside risk over a specified time period. It is the portfolio's maximum loss, expressed as a percentage, in a peak-to-trough decline before a new peak is attained. Portfolio Breakdown is reflective of the current strategy exposure but is subject to change. The ARC Sterling Steady Growth PCI is determined by Oakglen to be the most suitable benchmark for comparison purposes only. It must be noted that the last 3-month performance figures may be based on ARC estimates and may therefore be subject to revision. Further information can be found here: www.suggestus.com.
